

Boost your existing health benefits

This 3-in-1 program was designed to help you live a longer, fuller life. With trusted experts by your side, learn about your unique health risks and then take action to stay healthy.

1 Feeling healthy? Let's keep it that way.

Get access to advanced DNA screenings that help identify health risks:

- **Genetic Health Screen** to learn about your risk of cancer, heart conditions, and dozens of other health issues—so you can take steps to stay healthy.
- **Pharmacogenomic Testing** to see how you likely respond to thousands of medications—so your doctor can pick the best ones for you.
- **Carrier Screening** to inform family planning decisions—because your family's health shouldn't be left to chance.

2 Have questions? Have in-depth conversations with an expert.

If your DNA screening results are positive, our knowledgeable experts can answer any questions and help you plan your next steps. Plus:

- If the Genetic Health Screen finds that you're at high risk of cancer, we offer a new type of blood test that can help detect more than 50 types of cancer early. (Launching in early 2027.)
- We can also help you know which preventive screenings to ask your care team about, so nothing gets missed. And, if helpful, we can help coordinate them.*

3 Big diagnosis? Feel confident with wraparound guidance.

If you develop a serious illness like cancer (or another serious condition influenced by genetics), it can seem like the whole world stops. That's when our highly trained, U.S.-based team jumps into action:

- Get 1-on-1 guidance so that you understand your options, can overcome barriers, and feel supported every step of the way.
- If you're diagnosed with cancer, we can also help determine if additional DNA testing could help identify the best treatments for you.
- We're also there for you if you're a cancer survivor or caring for a loved one with cancer.

"I felt fine, but I didn't know everything about my health. Now I do—and I have a plan"

– Scott

"I don't have cancer in my family, so it was a shock. I was so grateful I had Genomic Life."

– Kim
